

Instapak FoamWrap™ Express

Foam Packaging System

Damage Reduction
in an Efficient,
Automated
System

ON-DEMAND FLEXIBLE PROTECTION

The Instapak FoamWrap™ Express foam packaging system from Sealed Air® creates Instapak FoamWrap™ material for a variety of packaging applications. The system uses a range of Instapak® high performance packaging foams that provide superior protection with minimal foam usage. A compact design, customizable programming and just-in-time accumulation capability makes the Instapak FoamWrap™ Express system a perfect fit for any size packaging operation.

ADVANCED INSTAPAK FOAMWRAP™ MATERIAL

The Instapak FoamWrap™ Express system features a variety of new advancements that improve on our Instapak FoamWrap™ material technology.

- Flow controlled dispensing allows the system to produce foam filled tubes, ranging from 1" to 5" diameter.
- Perforations can be programmed to suit individual needs and applications.
- User friendly touch key control panel allows operators to pre-program up to 6 "recipe" combinations

Reduce dimensional weight and minimize packaging material

WIND IT UP AND LET IT GO

Our optional accumulator/roll winder attachment feeds the Instapak FoamWrap™ material into a cushion bin or winds it into easy-to-use rolls, for later use or delivery to multiple workstations. This material can then be distributed to decentralized workstations or stored for peak usage.

GET MORE BY USING LESS

Capitalizing on the ability to produce low-profile material, the Instapak FoamWrap™ Express can deliver significant protection while allowing the packager to reduce cube size and overall shipping volume. By reducing material usage, users can also save on dimensional weight shipping fees and the environmental resources necessary to transport larger volume packages.

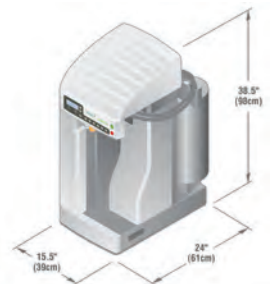

SPECIFICATIONS

Weight (without material)
85 lbs

Overall Size (L x W x H)
24" x 15.5" x 38.5

Electrical
200-240 VAC Dedicated Circuit, 50/60 Hz, 30 Amp, Single-Phase with equal voltage from each phase to ground

Receptacle Type
NEMA L6-30R

Systems may be equipped with an electronic communication device which allows Sealed Air® to obtain information about equipment operation for the purpose of improving performance.
